WINNIPEG SCHOOL DIVISION STUDENT DEMOGRAPHICS – 2015/2016

SECTION A. Student Demographics – 2015/2016

Background

The results presented in this report are obtained from the Division's Student Administration System records. Each student's record is examined and, if there is sufficient information, a determination of the student's family status is made. Languages spoken at home are taken directly from the records.

Students' families are coded as single parent, two parents and other. A student is considered to be living in a single parent family if living with any one of mother, stepmother, father, stepfather, grandmother, or grandfather; and living in a two parent family if living with any two of mother, stepmother, father, stepfather, grandmother, or grandfather. The 'other' category includes students living in group homes, in agency care, living on their own or with friends, or living with family members other than those considered to be parents.

Results are reported separately for elementary grades (N-6), junior high grades (7-8 or 7-9) and senior high grades (9-12).

Data Highlights

Parent Status

- ❑ In 2015/2016, 95.5% (30,603) of Division students lived with parents or guardians. Of those living with parents, 30.2% lived in single parent families (**Figure 1, and Tables 1 and 2, pages 6 to 7**).
- ❑ In **Eleven elementary** and **ten secondary** schools, the percent of students living in single parent families was **equal or greater than 50%**. The percent of single parent families in **elementary schools** ranged from 5.3% for Robert H. Smith to 75.8% for Niji Mahkwa Elementary. The percent of single parent families in **secondary schools** ranged from 10.6% for Collège Churchill – 7-8 to 76.9% for Niji Mahkwa - 7-8.

**Figure 1. Students' Family Status
(those living with parents - 30,603)**

Languages Spoken at Home

- ❑ No English was spoken in the homes of 2,297 students (7.5%). This is labelled "Other Language Only" in **Tables 1 to 3 (pages 6 to 8)**, and **Figure 2** below.
- ❑ The **elementary** schools with the highest percentages of students in homes where **no English was spoken** were Brock Corydon (25.6%), Sister MacNamara (19.2%), and J.B. Mitchell (15.3%). For **secondary** schools, General Wolfe (21.7%), Hugh John Macdonald (19.7%), Daniel McIntyre (17.0%), and Ralph Brown 7-8 (16.7%) had the highest percentage of students coming from homes where no English was spoken.
- ❑ English and another language were spoken in the homes of 11,183 students (36.5%).
- ❑ **Fifty percent or more of the students** from **six elementary schools** (Lansdowne Elementary, Lord Nelson, Sargent Park Elementary, Stanley Knowles Elementary, Tyndall Park, and Wellington) and **six secondary schools** (Andrew Mynarski, Meadows West 7-8, Sacré-Coeur 7-8, Sargent Park 7-9, Sisler, and Stanley Knowles 7-8) were in homes where **English and another language** were spoken.

**Figure 2. Languages Spoken In Students' Homes
(those living with parents)**

- ❑ The two language categories, "Other Language Only" and "English & Other Language" are combined into a category called "**Not English Only**". In total, **44.0% of students living with parents** (with language data) came from such homes.
- ❑ **Figure 3 (page 5)** provides percentages based on the 13,480 students living with parents in "Not English Only" homes. The **five most frequently reported languages**, other than English, spoken in these students' homes were Tagalog (6,076), Anishinaabe (808), Cree (734), Indic (694), and Spanish (386).
- ❑ Languages spoken in Divisional homes are summarized in **Table 3 (page 8)**.

**Figure 3. Languages Other Than English Spoken in Students' Homes
(13,480 students)**

(Source: Winnipeg School Division Records, Sept. 2015)

Immigrants/Refugees

- ❑ In 2015/2016, 24.3% (7,440) of Division students living with their parents were immigrants or refugees (Tables 1 and 2, pages 6 to 7).
- ❑ The elementary schools with the highest percentage of immigrant and/or refugee students were Victoria-Albert (43.1%), Lord Nelson (42.8%), Harrow (35.4%), and Faraday (35.0%). For secondary schools, Daniel McIntyre (60.6%), Andrew Mynarski (57.6%), and Sargent Park 7-9 (53.2%) had the highest percentage of immigrant and/or refugee students.

							2,297	

Note: Tagalog includes Tagalog, Pilipino, Ilonggo, Cebuano, Bicol, and Kapampangan; Anishinaabe includes Anishinaabe, Ojibway, Ojibway/Saulteux, and Saulteux; Cree includes Cree, Ininiw, and Oji-Cree; Indic includes Bangla, Bengali, Gujarati, Hindi, Nepali, Panjabi, Punjabi, Sinhalese, and Urdu; Chinese includes Chinese, Cantonese and Mandarin; Cushitic includes Borana, Oromo, and Somali; Arabic includes Arabic, Lebanese, and Maltese; Ethiopian includes Amharic and Tigrigna; Iranian includes Dari, Farsi, Kurdish, Pashto, Yazidi, and Persian; Tibeto-Burman includes Dha-Nywa, Karen and Burmese; Bantu includes Kisi, Swahili, Kirundi, Congolese, Lugandan, Nigerian, Xhosa, Zulu, Nyanja , Chewa, and Sesotho.

Results based only on those students living with parents.

Notes on Tables 1, 2, and 3

1. Adolescent Parent Centre and Winnipeg Adult Education Centre are excluded from analysis.
2. Adults (greater than 21 years old) are excluded from analysis.
3. Percentages for the columns under the heading "INFORMATION ABOUT STUDENTS LIVING WITH PARENTS" are based only on those students who were living with parents.
4. Enrolment is the official September 30th enrolment.
5. % Students surveyed are those students with sufficient data to determine family status.
6. % Single parent are those students living in a single parent household.
7. Results are presented in Tables 1, 2, and 3 by grade groupings: 1) elementary [N-6]; 2) secondary which includes junior high [7-9 in junior high schools, grades 7-8 in combined junior/senior high schools, and grades 7-8 in elementary schools that have these grades]; and senior high [9-12, including SU if present].

WINNIPEG SCHOOL DIVISION STUDENT DEMOGRAPHICS – 2015/2016

SECTION B. Student Mobility and Stability – 2015/2016

Introduction

This report summarizes the data on student mobility and stability for the 2015/2016 school year. Mobility and stability are calculated using the data from the eight-month period from October 1 to May 31. The data is based on student transactions on the Division's Student Administration System.

Definitions

Mobility is the number of the total transfers divided by the average monthly enrolment*, multiplied by one hundred. Total transfers include transfers in and transfers out.

$$\text{Mobility} = \frac{\text{Total Transfers}}{\text{Average Enrolment}} \times 100$$

Stability is the number of stable students divided by the average monthly enrolment, multiplied by one hundred. Stable students are those who were enrolled by October 1 and had not transferred out before May 31 (or had not transferred at all).

$$\text{Stability} = \frac{\# \text{ Stable Students}}{\text{Average Enrolment}} \times 100$$

The stability rate is easier to interpret than the mobility rate. A stability rate of 85% means that 85% of the students have stayed at the school from October to May. A mobility rate has no tangible meaning by itself; but provides a relative measure of the incidence of student transfers for a school (both transfers in and transfers out) in comparison to other schools in the Division.

Discussion of Data

Mobility Data

Elementary Mobility (Nursery to Grade 6)

- The mobility rate in 2015/2016 for all elementary grades was 21.9%.
- The figure to the right shows the frequency distribution of elementary mobility.

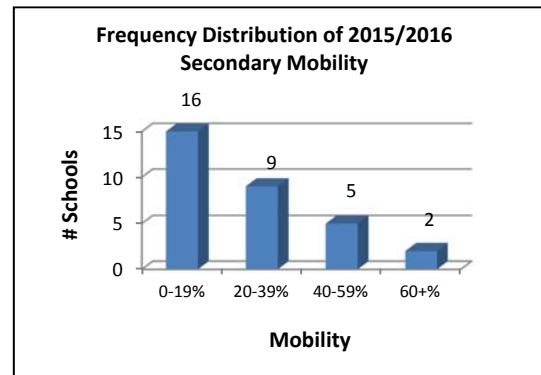

* In this report the average monthly enrolment is based on the average of the month end enrolment.

- In 2015/2016, four schools, Norquay, William Whyte, Niji Mahkwa, and Weston, had a mobility rate of over 60%.
- The individual elementary school mobility results are found in **Tables 1 to 4 (pages 4 to 7)**. In 2015/2016, mobility at individual elementary schools ranged from 2.4% (Robert H. Smith) to 55.7% (Norquay).
- Schools with the greatest decrease in mobility since the previous year were Norquay (22.8%), Machray (21.2%), and Gladstone (17.5%).
- Schools with the greatest increase in mobility for the same period were Strathcona (9.7%), Niji Mahkwa (9.7%), John M. King (9.2%), Ralph Brown (9.2%), and David Livingstone (9.0%).
- Total transfers (**Table 3, page 6**) ranged from 8 (Grosvenor) to 173 (Sister MacNamara).

Secondary Mobility (Grades 7 and up)

- The Division mobility rate in 2015/2016 for all secondary grades was 18.9%.
- The distribution of secondary mobility rates in 2015/2016 is illustrated in the figure to the right.
- Two schools had mobility of 60% or greater: Niji Mahkwa and R.B. Russell.

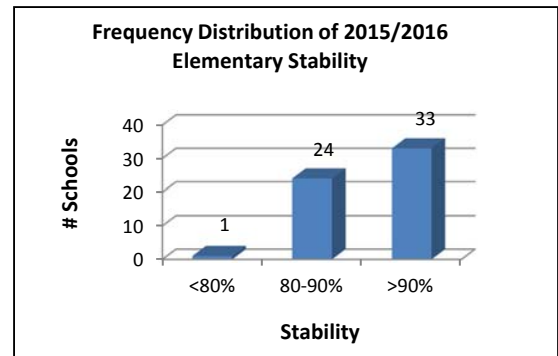

- **Tables 6 to 8 (pages 9 to 11)** list mobility rates and total transfers in 2015/2016 for individual secondary schools. Mobility rates ranged from 0% (George V 7-8) to 90.7% (Niji Mahkwa).
- Schools with the greatest decrease in mobility from the previous year were R.B. Russell (50.0%) and Argyle (26.7%).
- Schools with the greatest increase in mobility from the previous year were Ralph Brown 7-8 (25.6%), Niji Mahkwa (18.7%), David Livingstone 7-8 (11.9%), and Gordon Bell (11.4%).
- Total transfers (**Table 7, page 10**) ranged from 0 (George V 7-8) to 376 (Gordon Bell).

Stability Data

Elementary Stability (Nursery to Grade 6)

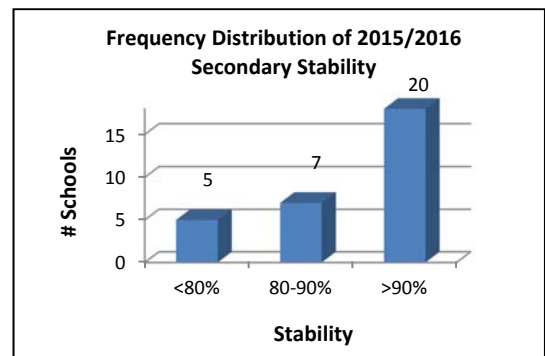

- The distribution of Elementary Stability rates in 2015/2016 is illustrated in the figure to the right.
- Thirty-three of the fifty-eight elementary schools had a stability rate of over 90%.
- One school had a stability rate less than 80%: John M. King.
- Over the last 3 years, elementary school stability rates remained around 91% (**Table 1, page 4**).

- The schools that showed the greatest decrease in stability this year were Ralph Brown (6.5%), David Livingstone (3.7%), Shaughnessy Park (3.3%), and George V (3.3%).
- Schools that showed the greatest increase in stability were Machray (8.2%), Champlain (5.4%), and Gladstone (5.1%).
- **Table 4 (page 7)** lists the 2015/2016 Elementary Stability figures in order of decreasing stability. Stability rates ranged from 79.6% (John M. King) to 99.0% (Robert H. Smith).

Secondary Stability (Grades 7 and up)

- The figure to the right summarizes the stability rates for secondary schools in 2015/2016.
- Over half of all secondary schools had a stability rate greater than 90%.
- Five secondary schools had stability rates less than 80%: Niji Mahkwa, R.B. Russell, Argyle, Gordon Bell, and Children of the Earth.

- **Table 5 (page 8)** shows the stability rates for secondary schools over the last 3 years.
- Argyle (8.2%) and Shaughnessy Park 7-8 (7.9%) had the greatest increase in stability from the previous year, while Meadows West (7.2%) and Stanley Knowles (5.3%) had the greatest decline in stability.
- **Table 8 (page 11)** lists the 2015/2016 Secondary Stability figures in order of decreasing stability. Stability rates ranged from 61.9% (Niji Mahkwa) to 100% (George V 7-8).

WINNIPEG SCHOOL DIVISION STUDENT DEMOGRAPHICS – 2015/2016

SECTION C. The Winnipeg School Division 2011 Census Data and 2011 National Household Survey (NHS) Data

Background

This section of the report summarizes some of the major variables in Statistics Canada's 2011 Census and 2011 National Household Survey (NHS). The four tables and three maps present information for all people living in the Winnipeg School Division. The data is presented for each of the fifty-four elementary school neighbourhood catchment areas and the Winnipeg School Division for comparison. **Census and NHS definitions for Tables 1 to 4 can be found at the end of this section (pages 29 to 30).** Note that methodologies differed between the 2006 Census, the 2011 Census, and the 2011 National Household Survey therefore comparisons should not be made between them. Table 1 provides the global non-response rate (GNR) for each of the fifty-four English elementary school catchments. The GNR is the main quality indicator of the 2011 National Household Survey; a smaller GNR indicates a lower risk of non-response bias and therefore a lower risk of inaccuracy. Information from school catchments with high global non-response rates should be taken with caution because of the higher risk of inaccuracy.

Table 1. Statistics Canada - 2011 NHS Global Non-Response Rates

Machray	28.8%		

Discussion of Data

Table 2

Table 2 (page 23) contains information on families, income, unemployment, and education levels. The first column provides the non-institutional population size of the catchment area based on the 2011 Census. There are two measures of the percentage of lone parents in the area in the 2011 Census. The first is the percentage of all census families that are lone parent families, and the second is the percentage of those census families with children living at home that are lone parent families. A census family is defined as any married couple or couple living common-law (with or without children of either or both partners), or a lone parent of any marital status with at least one child living in the same dwelling. A couple may be of opposite or same sex. Children include grandchildren living in the same household as their grandparents with no parents present. **The percent of census families with children that are lone parent families ranged from 16.3% to 64.3%.**

There are two measures of family income in the area in the 2011 National Household Survey (NHS). The first is the median income, in 2010, of all economic families. An economic family refers to a group of two or more persons who live in the same dwelling and are related to each other by blood, marriage, common-law or adoption. A couple may be of opposite or same sex. The second measure is the median income, in 2010, of census families with one or more children under 18 years. The second measure is the median income, in 2010, of census families with one or more children under 18 years. Please refer to the global non-response rates in Table 1 to determine the accuracy of the family income values.

In previous years we reported the Prevalence of Low Income After-Tax which is the percentage of economic families below the low-income cut-offs after taxes. This measure was not available in the 2011 Census or in the 2011 National Household Survey. For additional information on low-income cut-offs please see the economic measures in Section D (p. 31).

The unemployment rate is the percentage of the labour force that was unemployed the week before census day. The unemployment rate used in Table 2 is that of persons 15 years and over in the labour force according to the 2011 NHS. The labour force includes persons 15 years of age or over who were either employed, actively looking for work, or were expecting to start work in four weeks. **The unemployment rate ranged from 2.5% to 22.0%.**

The column labelled "< Grade 12 Education" is the percentage of the population 25 to 64 years old that has a level of schooling less than grade 12. This is followed by the percentage of the population 25 to 64 years that has a university education. Both are taken from the 2011 National Household Survey. [Figure 1](#) shows that the catchment areas with the highest percent of people with less than a grade 12 education are concentrated primarily in the Inner City. Conversely, catchment areas with a higher percentage of people with university education are concentrated primarily in the South. **The percentage of the population between 25 and 64 years with less than grade 12 education ranges from 1.7% to 45.7% and the percentage with a university education ranges from 9.4% to 71.6%.**

The Division has more lone parents and lower income families, higher unemployment, and more people with less than grade 12 education than the City as a whole.

Table 3

Table 3 (page 25) contains information on visible minorities, ethnicity, Aboriginals and immigrants. The first column again provides the population size of the area which is based on the 2011 Census. All the subsequent fields in the table are based on information from the 2011 National Household Survey.

The second column in the table indicates the percentage of the population who identified themselves as being a member of a visible minority. Visible minorities are defined as "persons, other than Aboriginal peoples, who are non-Caucasian in race or non-white in colour". **In 2011, 28.6% of people in the Division were visible minorities while visible minorities made up between 2.9% and 67.6% of the people living in catchment areas across the Division.**

Figure 2 (page 26) shows the relative numbers of visible minorities, Aboriginal people, and other people across the Division. Catchment areas with the highest percent of Aboriginal people are concentrated primarily in Inner City catchment areas while catchment areas with the highest percent of visible minorities are concentrated in the Inner City, North and Central areas.

The next three columns indicate, in descending order, the three most frequent ethnic origins - this includes single and multiple responses. English, Filipino and Scottish were the three most frequent ethnic origins in the Division. If two or more ethnic origins have equal numbers, all are listed (e.g., Scottish/German).

The number of people who reported identifying with at least one Aboriginal group (North American Indian, Métis, or Inuit) is listed next. There were two measures of the number of Aboriginal people in the 2011 NHS. One was based on the ethnic origin question and one was based on the Aboriginal identity question. This table uses the second measure. This provides a count of the number of people who reported identifying with at least one Aboriginal group, and/or those who reported being a Treaty Indian or a Registered Indian, and/or who were members of an Indian Band or First Nation. **In 2011, 16.5% of Division residents considered themselves Aboriginal, with percents ranging from 2.0% to 56.0% for school catchment areas.**

The last column indicates the percentage of the population that are, or had been at one time, landed immigrants in Canada. A landed immigrant is a person who is not a Canadian citizen by birth, but who has been granted the right to live in Canada permanently. **In the Division, 26.7% of the population is or had been a landed immigrant with values ranging from 7.2% to 51.7% for school catchment areas.**

In summary, the Winnipeg School Division has a higher percentage of visible minorities, Aboriginal people, and immigrants than does the City of Winnipeg.

Table 4

Table 4 (page 27) provides information on home languages and mother tongue languages from the 2011 Census. Home language is the language spoken most often or on a regular basis at home by the individual at the time of the census. Mother tongue refers to the language first learned at home in childhood and still understood at the time of the census. A person could have a single home or mother tongue language or multiple home or mother tongue languages. The 'Other Languages' category (defined as a grouping of all non-official languages collected by the census that are not displayed separately) was not included in the language columns. If two or more languages have equal numbers in a school neighbourhood catchment area, all are listed (e.g., Portuguese/ Somali/Spanish).

The first column in the table indicates what percentage of the people had a home language that was not English. Overall, in the Division, this was 14.4% and it varied from 1.5% to 37.3% across the Division. A listing of the three most frequent single response home languages (other than English) follows. Only languages that accounted for at least 1% of the total catchment population were included in the top three home languages for the area. Tagalog was the most frequently cited home language in the Division, other than English. All other languages in the Division accounted for less than 1% of the total Division population and therefore were excluded.

The next three columns in the table are a listing of the three most frequent single response mother tongue languages (other than English). **The last column is the percentage of people whose mother tongue language was not English. In the Division as a whole, this was 28.2% and it varied from 9.2% to 51.3% across the Division.** Tagalog, French and German were the three most frequently reported mother tongues other than English in the Division.

Compared to the City of Winnipeg, a higher percent of people living in the Winnipeg School Division reported a home language and mother tongue other than English.

The one-year movement data which is defined as the percentage of people who have moved within a year of the census is shown in **Figure 3 (page 28)** for the Division.

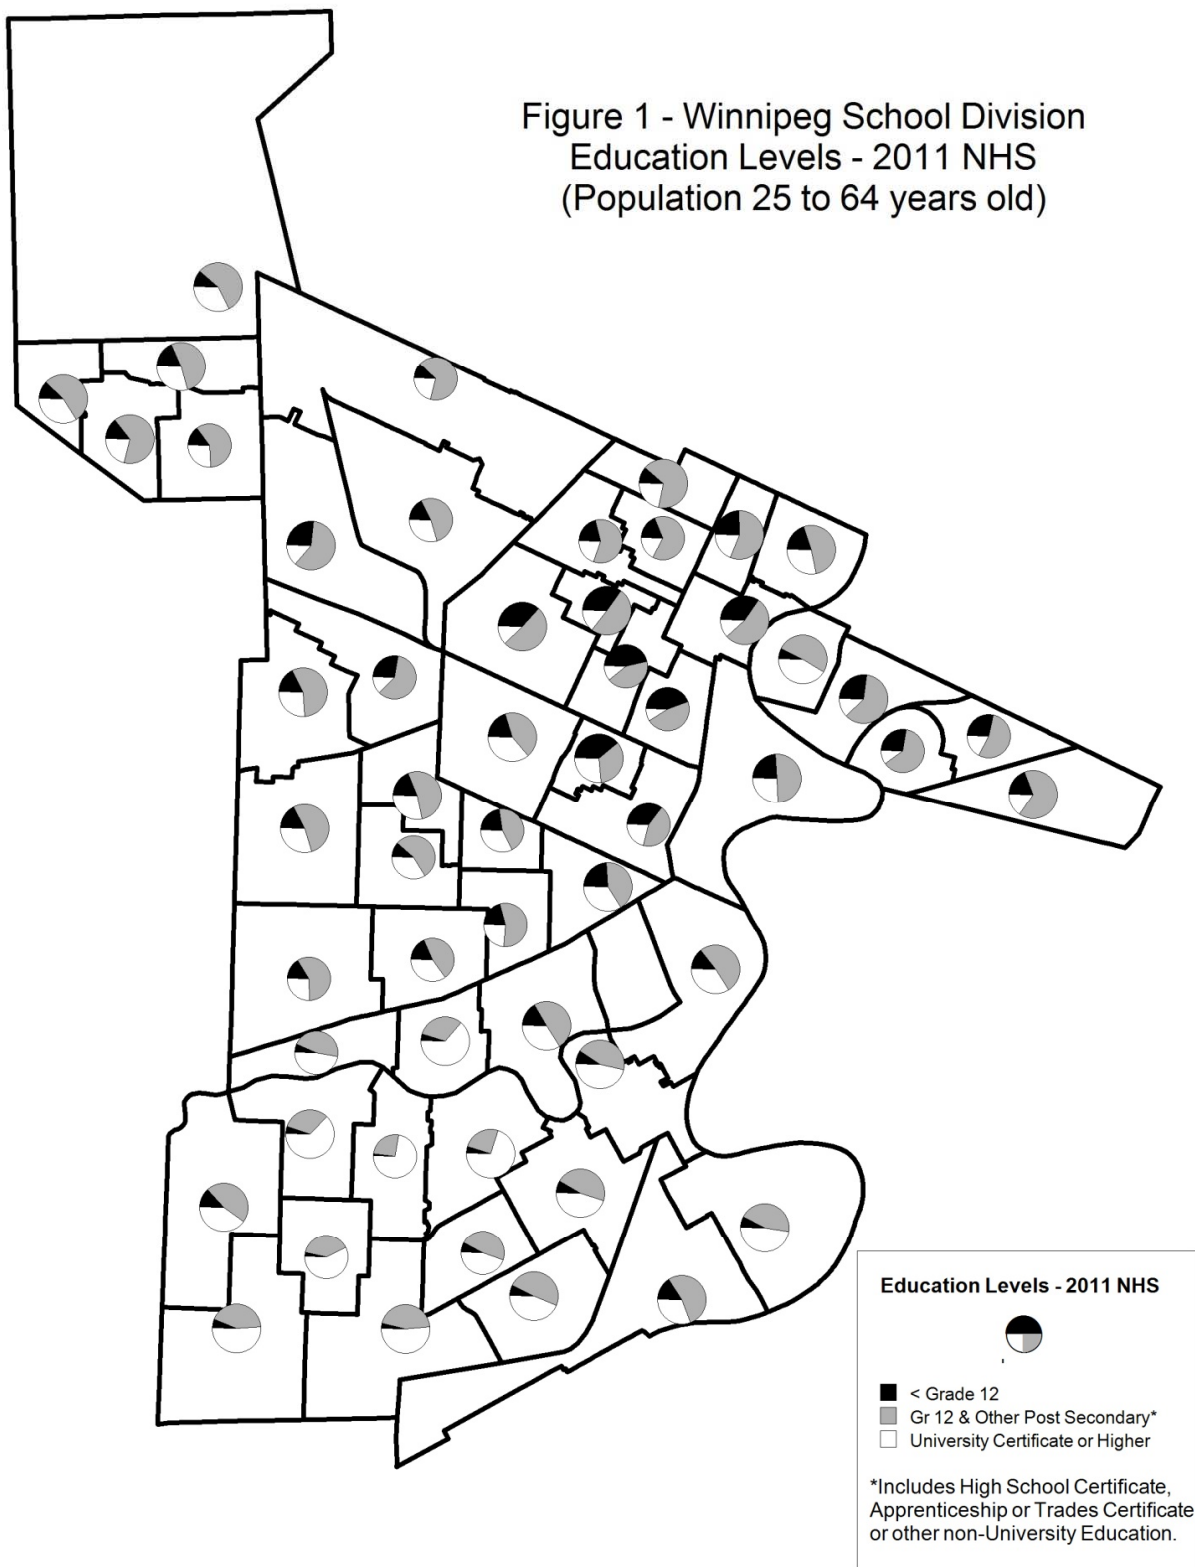

Table 2. Statistics Canada - 2011 Census Data and 2011 NHS - Families, Income, Unemployment & Education

Census and National Household Survey Definitions

Table 1 (page 20)

Global Non-Response Rate. The global non-response rate is used as an indicator of data quality. It combined household non-response and item non-responses, and is weighted. A smaller global non-response rate indicates a lower risk of non-response bias and therefore a lower risk of inaccuracy.

Table 2 (page 23)

Census Family. A census family is defined as a married couple and the children, if any, of either or both spouses; a couple living common law and the children, if any, of either or both partners; or, a lone parent of any marital status with at least one child living in the same dwelling and that child or those children. All members of a particular census family live in the same dwelling. A couple may be of opposite or same sex. Children may be children by birth, marriage or adoption regardless of their age or marital status as long as they live in the dwelling and do not have their own spouse or child living in the dwelling. Grandchildren living with their grandparent(s) but with no parents present also constitute a census family.

Economic Family. An economic family refers to a group of two or more persons who live in the same dwelling and are related to each other by blood, marriage, common-law or adoption. A couple may be of opposite or same sex. Foster children are included.

Unemployment Rate. The unemployment rate is the percentage of the labour force that was unemployed the week before census day. The labour force includes persons 15 years of age or over who were either employed, actively looking for work, or were expecting to start work in four weeks.

Highest level of schooling. 'Less than Grade 12 Education' is the percentage of the population 25 years to 64 years that has a level of schooling less than grade 12, and 'university education' is the percentage of the population 25 to 64 years that has a university education.

Table 3 (page 25)

Visible minorities. Visible minorities are defined as "persons, other than Aboriginal peoples, who are non-Caucasian in race or non-white in colour".

Aboriginal. There were two measures of the number of Aboriginal people. One was based on the ethnic origin question and one was based on the Aboriginal identity question. Table 3 uses the second measure. This provides a count of the number of people who reported identifying with at least one Aboriginal group, that is, First Nations (North American Indian), Métis or Inuk (Inuit), and/or those who reported being a Treaty Indian or a Registered Indian, and/or who were members of an Indian Band or First Nation.

Landed immigrant. A landed immigrant is a person who is not a Canadian citizen by birth, but who has been granted the right to live in Canada permanently.

Ethnic origins. Ethnic origin refers to the ethnic or cultural origins of the person's ancestors.

Table 4 (page 27)

Home language. Home language is the language spoken most often or on a regular basis at home by the individual at the time of the census. A person could have a single home language or multiple home languages. The 'Other Languages' category (defined as a grouping of all non-official languages collected by the census that are not displayed separately) was not included in the language columns in Table 4.

Mother tongue. Mother tongue refers to the language first learned at home in childhood and still understood at the time the data was collected. A person could have a single mother tongue language or multiple mother tongue languages. The 'Other Languages' category (defined as a grouping of all non-official languages collected by the census that are not displayed separately) was not included in the language columns in Table 4.

WINNIPEG SCHOOL DIVISION SCHOOL DEMOGRAPHICS – 2015/2016

SECTION D. 2014 Family Income

Background

The data reported in this section is based on Income Tax Returns of those families that live in the Division and have children younger than 18 years of age. Data for each of the 54 English program elementary school catchment areas were obtained from Statistics Canada. This year, after-tax income was used in the report. The after-tax income is total income minus provincial and federal income taxes.

Two key measures of income were obtained. The first is Median Family Income. The median is the middle number of a group of numbers. Where a median income, for example, is given as \$32,000, it means that exactly half of the incomes reported are greater than or equal to \$32,000, and that the other half are less than or equal to the median amount.

The other measure is the percentage of families with children that are living below the low-income cut-off (LICO). The cut-offs are set where families spend 20 percentage points or more of their income than the Canadian average on food, shelter and clothing (taking into account size of community of residence and family size), and hence can be considered to be living in straitened circumstances.

Because students do not necessarily attend their neighborhood school, it was necessary to calculate a weighted measure of income for schools. The weighting is based on the addresses of all students attending a particular school. This results in two additional variables "Weighted Median Income" and "Weighted % Below LICO" for all schools.

Secondary schools, the French Immersion Milieu schools, and elementary schools with broad catchment areas only have values in the derived weighted columns because the unweighted data are obtained only for the 54 non-overlapping English program elementary catchment areas.

Discussion of Data

The 2014 Family Income data have been summarized on the following two pages. There were 25,530 families with children residing in the Division in 2014 and the Division-wide median family income for these families was \$49,890. Median family income values (weighted) ranged from \$27,272 (Niji Mahkwa) to \$103,977 (Robert H. Smith).

Thirty-three percent of the families with children residing in the Division in 2014 were living below the low-income cut-off. In fourteen individual school catchment areas, 50% or more of the families were living below the weighted LICO, and at the other extreme, another fourteen school catchment areas had a weighted LICO rate less than 20%.

Notes:

1. Weighting is based on addresses of students in all grades in 2015/2016.
2. Calculation based on unique nature of school.
3. The results are based on after-tax income.
4. Includes 500 families not assigned to a school catchment area.

**WINNIPEG SCHOOL DIVISION
SCHOOL DEMOGRAPHICS – 2015/2016**

SECTION E. Inner City Criteria 2015/2016

The accompanying tables contain the result of the Principal Component Factor Analysis of the Inner City Criteria for all schools in the Winnipeg School Division. This analysis identifies schools with the highest needs. Nine input variables (**Table 1**) were used and two output factors were identified – the Socio-economic Factor and the Language and Immigration Factor. Ranking of schools is based on the Principal Component Score for each factor. Schools with the highest socio-economic needs (**Table 2, page 35**) or the most non-English speaking students or most immigrants (**Table 3, page 36**) appear at the top of their respective tables. In this report, each school appears only once, and includes data for all grades.

Table 1. Variables Included in the Analysis	
Variables	Source of Data
% Students Not in Two Parent Families	Mayet System 2015/2016
Mobility	Mayet System 2015/2016
Stability	Mayet System 2015/2016
Median Income of Families That Have Children Younger Than 18 Years of Age (after taxes)	2014 Statistics Canada Income Tax Data
% Families With Income Less Than the Low Income Cut-Off (LICO) and That Have Children Younger Than 18 Years of Age	2014 Statistics Canada Income Tax Data
% Persons 25 to 64 Years With Less Than Grade 12 Education	Statistics Canada 2011 National Household Survey
% Students From Families Where Only English is Spoken	Mayet System 2015/2016
% Students in Grades K or Greater who are identified as Needs Support in English as an Additional Language (EAL)	Mayet System 2015/2016
% Students who are Landed Immigrants or Refugees	Mayet System 2015/2016

WINNIPEG SCHOOL DIVISION SCHOOL DEMOGRAPHICS - 2015/2016

SECTION F. Report on Inactive Students in Grades 7 to 12 - 2010/11 to 2015/16

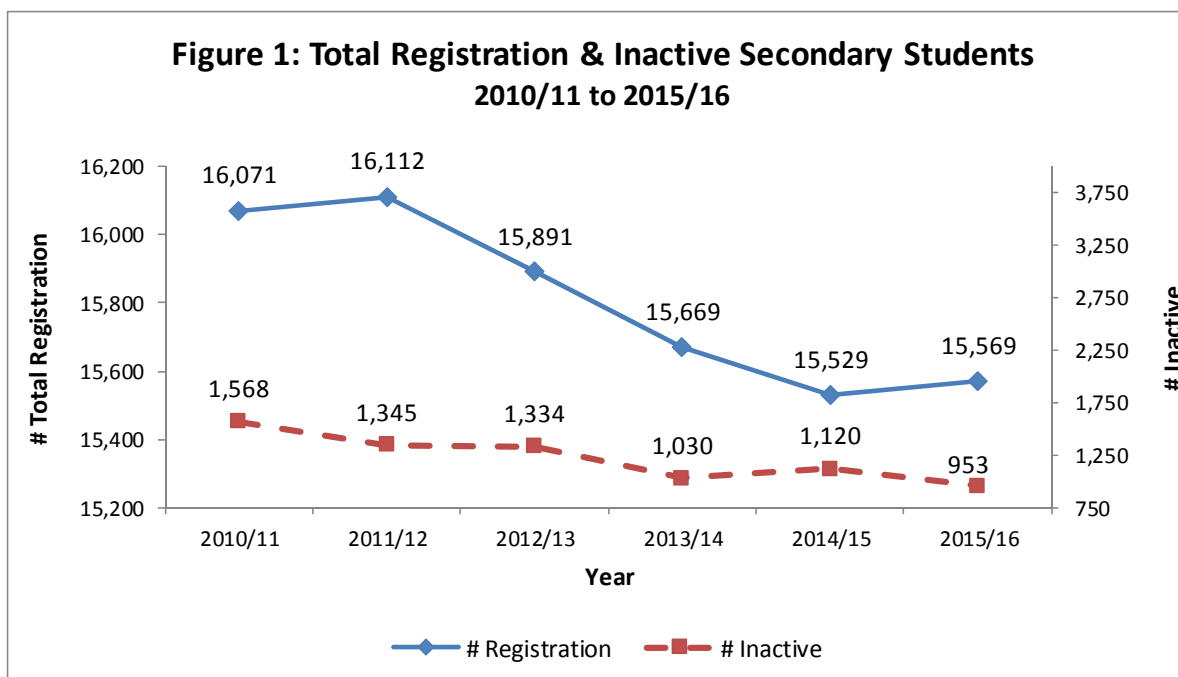

Background

Student withdrawal data is of interest to a great many people. However, determining when a student has withdrawn from school is not always an easy task. In this report, an inactive student is defined as a student who left a Division school between October 1 and May 31 inclusive, and for whom there is no record of re-entry into any Division school in the current year. All students in grades 7 or higher are included in this analysis (grades 7 to grade 12, JU and SU). To put the count of these inactive secondary students in perspective, the total number of students who have been at each school sometime between October 1 and May 31 is calculated. This is referred to as the 'Total Registration'.

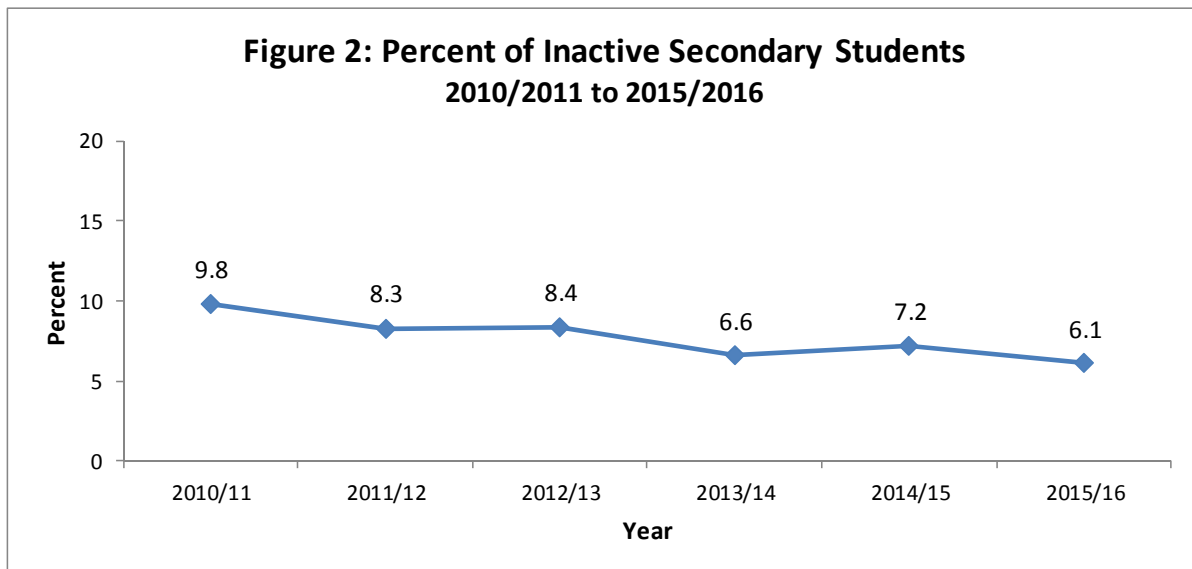

The purpose of reporting the inactive student data is to get baseline data of student withdrawals from school. While some inactive students are students who have withdrawn from or 'dropped out' of school, some will be students who have registered in another division. For this reason, *the numbers and percentages of inactive students reported should not be viewed as an accurate record of student withdrawals*. The information provides some insight into the relative magnitude of student withdrawals over the years reported and provides a means of comparison between schools and across the years.

Discussion of Data

The Total Division Registration in grades 7 and up showed an increase from 15,529 in 2014/2015 to 15,569 in 2015/2016, while the number of inactive students has decreased since the previous year (**Figure 1**).

The **number of inactive secondary students** peaked in 2010/2011. Division wide, the **percentage of inactive secondary students** in 2015/2016 decreased by 1.1% from the previous year 2014/2015 (**Figure 2**). In 2015/2016, inactive secondary students represented **6.1%** of total secondary registrations.

The percentage of students who became inactive at individual schools ranged from **0%** to **50.0%** in **2015/2016**. There are 33 schools with students in Grades 7-12. **Figure 3** below shows the number of schools that have less than 10% inactive students, 10-19% inactive students, and over 19% inactive students. Twenty-four schools had less than 10% inactive students, the same as in the previous year. At the other end of the scale, there were four schools with more than 19% inactive students, again the same as in the previous year. **Table 1** shows the percentage of inactive students for each secondary school in 2015/2016.

WINNIPEG SCHOOL DIVISION SCHOOL DEMOGRAPHICS - 2015/2016

SECTION G. Aboriginal Family Data – 2011 National Household Survey

Aboriginal Population

The City of Winnipeg (Census Metropolitan Area) had 78,420 Aboriginal people at the time of Statistics Canada's 2011 National Household Survey. Of these, 33,965 (43%) lived in the Winnipeg School Division Catchment area (see Fig. 1). Looking at the Aboriginal population as a percent of total population, 11.0% of Winnipeg's population was Aboriginal compared to 16.5% of the Winnipeg School Division's population (See Section C, Table 3, page 25).

Fig. 1 Winnipeg Aboriginal Population - 2011 NHS

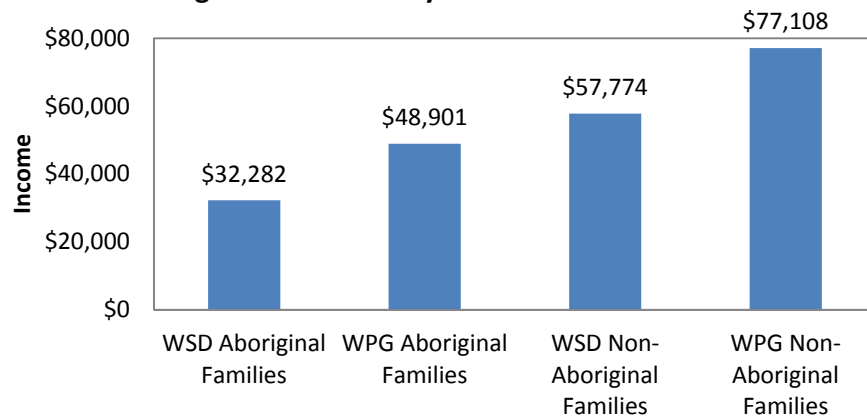

Aboriginal Families

Table 1 (pages 42 to 43) shows the number of Aboriginal families with children under 18 living in Manitoba, the City of Winnipeg, and the Winnipeg School Division elementary catchment areas in 2011. The first two columns are the number of all families in each area broken down by Aboriginal families and non-Aboriginal families. The third column gives the total families (Aboriginal and non-Aboriginal) for each area. The last five columns contain data on **families with children less than 18 years of age**. The first of these two columns give the number of **Aboriginal families** in each area and the **Aboriginal median family income** for each area. The next two columns give the number of **non-Aboriginal families** living in each area and the **non-Aboriginal median family income** for each area. The last column gives the total number of families (both Aboriginal and Non-Aboriginal) with children under 18 living in each area.

In 2011, the City of Winnipeg had 15,750 Aboriginal families with children less than 18 years old and 6,515 (41%) of them lived in the Winnipeg School Division catchment area. These 6,515 families represented 26.7% of all families with children under 18 living in the Division.

The median family income for Aboriginal families with children under 18 living in the Division was \$32,282, over \$16,000 less than the median family income for comparable families (Aboriginal with children under 18) living in the City as a whole (\$48,901), and over \$25,000 less than the median family income for non-Aboriginal families with children under 18 living in the Division (\$57,774) (See Fig. 2). Family income for Aboriginal families with children under 18 ranged from \$14,330 (Cecil Rhodes) to \$138,525 (Montrose).

Fig. 2 Median Family Income - 2011 NHS*

*Note: Only includes families with children under 18 living at home.

Table 2 (pages 44 to 45) shows the estimated percent of Aboriginal families with children under eighteen by Winnipeg School Division school in 2011. As not all families attend their local school and NHS data was not obtained for secondary schools and schools with special catchment boundaries, the estimated value for each school was obtained by using enrolment weights for the year in question. Niji Mahkwa and Children of the Earth percentages were set to 100%.

The average estimated percent of Aboriginal families with children for the Division in 2011 was 26.6%. The estimated percent of Aboriginal families with children for Division schools ranged from 5.2% (Queenston) to 100% (Niji Mahkwa and Children of the Earth). Among schools that are not designated Aboriginal only schools, David Livingstone had the highest percent (60.8%) of estimated Aboriginal families with children.
